

SCHOOLS AND GOVERNMENT EFFICIENCY PROGRAM

OG&E's Schools and Government Efficiency Program provides a variety of energy efficiency measures for educational and publicly funded facilities. We offer an easy assessment with no out-of-pocket costs, which will help you identify and install the measures that could bring you the biggest savings.

Lighting Retrofits and Controls

Modern, efficient fixtures use less energy while providing high-quality light that is designed to improve the learning environment.

Audits and Benchmarking

Starting with a walk-through assessment or an in-depth audit, we'll compare your organization's energy use with similar facilities to evaluate your savings potential.

Gym and Multipurpose Room Lighting Replacements

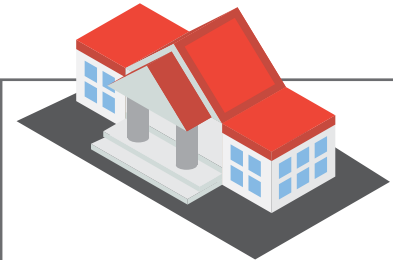

Older gym and multipurpose room lighting can be inefficient as well as unappealing. This retrofit will solve both issues.

Sports Lighting Incentives

Upgrading your sports facilities with new, high-efficiency lighting will help lower costs and raise the excitement levels at every big event.

HVAC Tune-ups

Our Advanced HVAC Tune-up is a smart way to lower cooling costs and boost comfort all summer. Some systems even see an increase in efficiency of up to 30 percent.
